

## Medtronic Receives Approval for U.S. Labeling of the Intellis™ Platform Showing Superior Back Pain Relief When Using DTM™ Spinal Cord Stimulation

*Revised Commercial Labeling to Reflect Outcomes of a Randomized Controlled Trial Demonstrating Superiority of DTM™ Spinal Cord Stimulation (SCS) Compared to Conventional SCS for the Treatment of Chronic Intractable Back Pain*

DUBLIN, March 17, 2021 /[PRNewswire](#)/ -- Medtronic plc (NYSE: MDT), the global leader in medical technology, today announced the U.S. Food and Drug Administration (FDA) has approved revised commercial labeling for the Intellis™ Platform with Differential Target Multiplexed (DTM™) programming for the treatment of chronic, intractable back and leg pain. The new labeling will include study outcomes from a multicenter randomized control trial reflecting superior back pain relief with DTM SCS when compared to conventional SCS.

The trial demonstrated with clinical and statistical significance that DTM SCS programming is superior to conventional SCS programming when used to treat intractable chronic back pain. At 3 months, 80% of patients treated with DTM SCS reported back pain relief of at least 50%, compared with 51% of patients treated with conventional SCS as measured by the Visual Analog Scale (VAS), a widely used and accepted measure for pain intensity.<sup>1</sup>

This labeling update closely follows the most recent presentation of 12-month clinical trial outcomes during a late-breaking clinical trial session at NANS 2021.<sup>2</sup> Trial results [showed](#) statistically significant and superior back pain relief with DTM SCS compared to conventional SCS at 12 months: 84% of patients with chronic back pain treated with DTM SCS reported at least 50% pain relief, compared to 51% of patients treated with conventional SCS. There was also a difference in the proportion of patients who reported profound back pain relief ( $\geq 80\%$  reduction in VAS score) favoring DTM SCS (69%) compared with conventional SCS (35.1%).<sup>2</sup>

"The body of clinical evidence proving the efficacy of DTM SCS in treating patients with chronic back pain continues to grow," said Charlie Covert, vice president and general manager, Pain Therapies within the Neuromodulation business, which is part of the Neuroscience Portfolio at Medtronic. "The updated labeling further strengthens the credibility of the outcomes from this therapy, and parallels the profound benefits our clinician partners are seeing with their own patients."

DTM therapy, which is clinically proven and only available on the Medtronic Intellis platform, is a unique and proprietary programming option available to treat patients with chronic pain that is based on years of preclinical research.<sup>3,4,5</sup>

Clinical trial data can be found [www.medtronic.com/DTM](http://www.medtronic.com/DTM). A manuscript has been submitted for consideration for peer-reviewed publication.

### **About the Intellis™ Platform**

The Intellis platform offers the world's smallest implantable neurostimulator. It is powered by proprietary Overdrive™ battery technology and was designed to overcome limitations with other SCS systems, optimized for a wide range of energy demands and provides effective long-term pain relief for patients. The neurostimulator also features SureScan™ MRI technology, allowing access to MRI anywhere in the body under certain conditions, and AdaptiveStim™ technology, which automatically adjusts stimulation based on the patient's needs and preferences in different body positions to ensure the patient receives the right dose of

stimulation at the right location.

### **About Medtronic Pain Therapies**

Medtronic has more than a 40-year history of developing innovative medical devices that have been shown to alleviate pain in different disease states and has a broad portfolio of device-delivered therapies that are alternatives or adjuncts to oral opioids.<sup>4</sup> Medtronic strives to be at the forefront of medical device innovation and to develop high-quality pain therapies that reduce pain and improve quality of life. While Medtronic pain therapies do not treat opioid addiction, we are committed to leveraging our capabilities and product portfolio in partnership with stakeholders — patients, providers, payers, regulators, elected officials, patient advocacy groups and employers — to address the unmet needs of pain patients and to support efforts to prevent opioid misuse due to chronic intractable pain.

### **About Medtronic**

Medtronic plc ([www.medtronic.com](http://www.medtronic.com)), headquartered in Dublin, Ireland, is among the world's largest medical technology, services and solutions companies – alleviating pain, restoring health and extending life for millions of people around the world. Medtronic employs more than 90,000 people worldwide, serving physicians, hospitals and patients in more than 150 countries. The company is focused on collaborating with stakeholders around the world to take healthcare Further, Together.
