

Medtronic announces CMS national coverage analysis for Symplicity™ Spyril Renal Denervation System

- *National coverage analysis is the first-of-its kind for a minimally invasive, interventional treatment for high blood pressure*
- *Milestone is supported by large public health need and robust, long-term data from the SPYRAL-HTN global clinical program*

GALWAY, Ireland, Jan. 13, 2025 [/PRNewswire/](#) -- Medtronic plc (NYSE: MDT), a global leader in healthcare technology, today announced that the Centers for Medicare & Medicaid Services (CMS) is opening a national coverage analysis (NCA) on renal denervation, a process that will allow the agency to review and develop a national Medicare coverage policy for renal denervation procedures for patients with hypertension. This national coverage analysis was initiated by CMS in response to Medtronic's request to support Medicare beneficiary access to the Symplicity™ Spyril renal denervation (RDN) system, used in the Symplicity blood pressure procedure.

"Hypertension is a global health epidemic that impacts a wide variety of patients," said Jason Weidman, senior vice president and president of the Coronary and Renal Denervation business within the Cardiovascular Portfolio at Medtronic. "As the leader in developing a minimally invasive treatment option for hypertension, Medtronic has been closely engaged with CMS to establish a national coverage pathway for Symplicity Spyril. We appreciate CMS' efforts in creating new pathways to expedite access to breakthrough technologies like Symplicity Spyril and look forward to our continued partnership in developing a national coverage policy."

CMS' action follows Medtronic's work with the agency to pilot the framework for the Transitional Coverage for Emerging Technologies (TCET) pathway to establish coverage for the Symplicity Spyril renal denervation system, a U.S. FDA-approved breakthrough device. As referenced in the CMS tracking sheet, the expected completion date for the national coverage analysis is October 11, 2025. Until a national coverage determination is put into effect, Symplicity blood pressure procedures will continue to be evaluated for coverage based on medical necessity for individual Medicare patients.

About the Symplicity Spyril renal denervation procedure

The Symplicity Spyril RDN system, approved by the U.S. Food and Drug Administration (FDA) in November 2023, is an innovative, minimally invasive procedure that delivers radiofrequency energy to nerves near the kidneys that can become overactive and contribute to high blood pressure. Symplicity Spyril is the only commercially available RDN device with the breadth of durable, consistent, long-term data and single catheter design. The SPYRAL-HTN clinical program has demonstrated 18 mmHg office blood pressure reductions out to three years in a real-world setting,¹ has the longest and largest real-world registry² and the largest dataset showing long-term reductions without the need for additional medication.²⁻³

The Medtronic SPYRAL HTN Global Clinical Program is the most comprehensive clinical program studying RDN in over 4,000 patients in the presence and absence of medication, and with high baseline cardiovascular risk. The Symplicity blood pressure procedure has demonstrated sustained and durable drops in blood pressure out to three years in randomized control and real-world registry trials.⁵⁻⁸ The Symplicity RDN system is approved for commercial use in over 75 countries around the world.

About Hypertension

Hypertension, or high blood pressure, impacts more than 1 billion adults worldwide, and is the leading modifiable cause of heart attack, stroke, and death.⁴ Despite available treatment with medications and lifestyle changes, blood pressure remains uncontrolled for many patients. Nearly 80% of adults with hypertension do not have it under control¹ and half of hypertension patients become non-adherent to medication within one year.⁴⁻⁵

About Medtronic

Bold thinking. Bolder actions. We are Medtronic. Medtronic plc, headquartered in Galway, Ireland, is the leading global healthcare technology company that boldly attacks the most challenging health problems facing humanity by searching out and finding solutions. Our Mission — to alleviate pain, restore health, and extend life — unites a global team of 95,000+ passionate people across more than 150 countries. Our technologies and therapies treat 70 health conditions and include cardiac devices, surgical robotics, insulin pumps, surgical tools, patient monitoring systems, and more. Powered by our diverse knowledge, insatiable curiosity, and desire to help all those who need it, we deliver innovative technologies that transform the lives of two people every second, every hour, every day. Expect more from us as we empower insight-driven care, experiences that put people first, and better outcomes for our world. In everything we do, we are engineering the extraordinary.
